

ISO 50001 CERTIFICATION

ENERGY MANAGEMENT SYSTEMS CERTIFICATION

By implementing the ISO 50001 standard, you can help improve your organization's energy efficiency, use, and consumption by taking a management systems approach.

Improve your organization's energy efficiency

As a result of increased pressure for managing energy performance, many national or regional standards for energy management have been developed and implemented around the world.

When an organization practices good energy management, top management and employees become more aware of how energy is used, the actual cost of energy, and the methods and equipment that can be used to control and reduce energy waste.

An energy management system provides the framework for promoting these best practices, creating transparency of information, and facilitating improvements.

New solutions to energy management

The international energy management standard, ISO 50001, was published in 2011. ISO 50001 establishes a framework for industrial plants, commercial facilities, or entire organizations to manage energy. According to ISO, the standard could influence up to 60% of the world's energy use, with broad applicability across national economic sectors.

Intertek offers third-party certification services for ISO 50001. By working with our global network of skilled auditors, you can be assured of an audit process that will give you

the independent verification of compliance your customers and stakeholders demand.

Benefits of implementing an energy management system

- Reduced energy costs
- Reduced environmental impacts
- Better use of existing energy-consuming assets
- Creates transparency and facilitates communication on the management of energy resources
- Promotes energy management best practices and reinforces good energy management behaviors
- Provides a framework for promoting energy efficiency throughout the supply chain
- Facilitates energy management improvements in the context of GHG (greenhouse gas) emission reduction projects

How Intertek can help

Since 1992, Intertek has issued certification to thousands of organizations across the world. The knowledge imparted by this experience allows us to provide an efficient certification process to all of our clients.

From sharing best practices and new industry requirements, to assessing your performance against your own objectives, we're dedicated to providing audit results that address your business needs and benefit the organisation.
